Registration is limited.

Family Psychoeducation Group

Purpose:

The group is intended for family members of individuals suffering from bulimia nervosa, anorexia nervosa, or other specified eating disorder. The program is designed to provide information on the nature of eating disorders and to offer suggestions on how to cope more effectively with the behavioral and emotional issues that arise in family relationships. The group does not address individual family dynamics in detail, but rather, provides information in general terms.

Who Can Participate?

Those eligible to participate include parents, siblings (age 16 and over), partners/spouses, boyfriends/girlfriends, relatives and, where relevant, close friends of individuals with the eating disorders. **Individuals with eating disorders are not eligible to participate in this seminar.** Significant others may participate regardless of whether the individual with the eating disorder is receiving treatment and regardless of that individual's age. On occasion, a limited number of professionals may be present to observe the group for ongoing professional development. Group facilitators will introduce observers at the beginning of the day. Observers will be required to adhere to the practice of confidentiality.

Format:

The program consists of a full day session from 9:00 am to 4:00 pm, typically, on a Saturday. The format will be both educational and supportive.

Content:

The morning session, focuses on diagnosis, epidemiology, physical and psychological complications, the multi-determined nature of eating disorders, the regulation of body weight, and the non-dieting approach. The afternoon session, focuses more specifically on family issues, reviews the psychological functions of eating disorders, family factors influencing the development and maintenance of eating disorders, coping with difficult emotions, general and practical strategies for supporting recovery, and an overview of treatment.
